

Cryoserver Appliance

“ Cryoserver has saved us time on back up requests and retrievals, recovering something off a tape is never a two minute job”

Gary Hancock,
North Warwickshire Council

“In theory people could delete their whole mailbox if they wanted to without losing any valuable information, thanks to Cryoserver “

David Chatterton,
South Liverpool

On-premise email archiving simplified

If you like to keep your business data in house, but have limited tech support, our email archiving appliance is right for you. It's plug-n-play, with no root access preventing you from deleting data from the command line. With an agreement contract, we manage both the hardware and software of this secure appliance. We offer a range of custom-made appliances – see their specifications in the table below.

Key Features

- Plug-and-play – easy to install
- Compliant with on-premise data storage requirements
- Control your data – minimise risk with on-premise hardware
- Flexible – choose from a range of appliances to suit your needs
- Scalable – spare bays for additional storage without a new machine
- Platform independent – same great solution no matter the platform
- One point of contact for both software and hardware support

Quality hardware

- You can maintain your own data in-house
- Appliances are delivered within two weeks of receipt of Purchase Order
- Appliances are custom-built to match your business needs
- Hardware issues covered quickly, as per the support agreement
- Replacement parts dispatched within 24 hours
- Simple installation process supported by our engineers
- Full support at no extra cost, with instant replacement of hardware

Benefits

- Presents savings for organisations of all sizes
- Keeps compliance officers happy with on-site email archive
- Totally independent of the internet, it gives you complete control of updates and more
- Your store maintained your way – control physical and remote access
- No need for in-house tech support to maintain either software or hardware
